

Solution Requirements

Date	10 July 2026
Team ID	XXXXXX
Project Name	Smart Lender – Loan Prediction System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users securely log in using username and password before accessing the system	High
2	Authorization levels	Admin manages the system, while users can submit loan details and view prediction results	High
3	External interfaces	Connects with the trained Machine Learning model and loan dataset for prediction.	High

4	Transaction Processing	The system receives applicant details, processes them using the ML model, and returns the loan eligibility result.	High
5	Reporting	Displays loan prediction results and stores applicant information for future reference.	Medium
6	Business rules, etc.	Loan eligibility is determined based on applicant income, loan amount, credit history, employment, and other financial factors.	High
7	Compliance to laws or regulations	Applicant information is securely stored and handled according to data privacy guidelines.	Medium
8	<i>Other</i>	The system provides a simple and user-friendly interface for loan prediction.	Low

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Loan prediction should be generated quickly.	Response time less than 2 seconds
2	Scalability	The system should support multiple users simultaneously.	Supports 100+ concurrent users

3	Security & Data Privacy	User information should be protected from unauthorized access	Password protection and secure data storage
4	Reliability & Availability	The application should be available whenever users access it.	99% uptime
5	Usability & Accessibility	The interface should be simple, responsive, and easy to use.	User-friendly interface compatible with modern browsers
6	<i>Other</i>	The system should be easy to maintain and update with new ML models.	Easy deployment and maintenance
